

### Articulated Trailer for Heavy Loads

This articulated trailer is a universal transport system KHG uses for the transport of individual items.

In most cases shielding material should be transported to the site as soon as possible. Upon its arrival, this material can be unloaded from the trailer and erected without outside assistance.

The trailer is fitted with a swing board system which enables the sides to be folded upwards, allowing unrestricted access for rapid loading and unloading.

Loading and unloading can also be performed using a tail lift, which has a lifting capacity of 3 tons to allow for the heavy weight of shielding blocks.

### Technical Data

Height	4.000 mm
Width	2.550 mm
Length	10.700 mm
Weight	8 t
Laden weight	22,5 t

Laden volume	
Length	10.400 mm
Width	2.450 mm
Height	2.200 mm
