

## Decontamination

### Decontamination Equipment

For decontaminating surfaces KHG has a range of cleaning equipment available. This equipment consists of standard devices as used in nuclear facilities for cleaning control areas under normal conditions

The following devices are available:

- Floor cleaning machine
- Water suction machine
- Industrial vacuum cleaner for solid materials
- High-pressure cleaner with accessories

KHG also has two special industrial vacuum cleaners for collecting contaminated solid material, such as sand or gravel. These devices are fitted with a cyclone separator for rough materials, mounted on a 200 litre drum. The size of nozzle used can be changed according to the material involved. The air passes through a reusable pocket filter and a class "S" suspended-sediment filter.

Technical Data:

Floor cleaning machine

Power supply	400V, 32 A
	15 kW
Performance	920 m <sup>3</sup> /h
Max. under-pressure	36 kPa
Weight	365 kg
Filter classification	DIN 24.184
