

SMF Transport Trailer

The trailer has a payload of 12,000kg and is intended to carry the tank module, decontamination module, floodlight module and plasma cutter module as well as spare parts for the SMF. An electric forklift truck with 3000kg capacity is also carried on board to move the modules at the scene of operations.

The double-axle trailer has a low platform, a swing-out panel on the right-hand side and a loading ramp for the forklift truck on the left. Drive is provided by an electro-hydraulic unit.
