

MAS 1 Module Transport Trailer

MAS 1 supports and transports the various SMF modules, enabling the operational range and variability of the SMF to be increased considerably

Special features of the SMF transport trailer are:

- Coupling and uncoupling can be remote-controlled
- All eight tyres are filled with polyurethane to protect them from punctures
- Low ground pressure makes the trailer suitable for cross-country use
- The brakes have an automatic electro-mechanical release which activates when the trailer is coupled
